

1 Introduction

This document covers details on how users install the add-on. We will also briefly explain how and why we are doing what we are doing.

1.1 Background

We are two students who are currently studying IT-Security in our third and last year. As every bachelor student we are to write/conduct a thesis about an area we are interested in and we have chosen Privacy.

Our main idea is to educate users of our add-on of tracking that occurs in our daily lives on the web. This is done by modifying the privacy organisation EFF's add-on Privacy Badger in a way that collects information about trackers without blocking them.

We restrict ourselves from further technical explanation, since it can effect the users answers in the survey.

2 Installation

Visit the link [länk till git] and click the button Clone or Download, followed by download ZIP. Unzip the zip-file to any folder.

2.1 Optional

Before installing the add-on we recommend our users that they remove cookies, site data and cached web content. This will log you out of any web sites you are currently logged in to and clear any stored usernames and passwords you might have. The process is done to give the add-on a fresh start and not show in-precise number of trackers.

If any other cookie and/or tracker blocking add-on is enabled, we ask you to disable those temporarily.

2.2 Mozilla Firefox

In the address bar type in about:debugging which will open up the add-on page. Click Load Temporary Add-on and locate the folder where you unzipped the downloaded file, navigate to /src and choose manifest.json

After this a new icon should appear in the top right corner of your web browser, and hence; The add-on is installed.

2.3 Google Chrome

In the address bar type in chrome:extensions which will open up the add-on page. Enable Developer mode in the top right corner. Click "Load unpacked", navigate to the folder containing .github, .tx, doc, release-utils, scripts, src and tests. Mark the src folder and choose Select folder.

After this a new icon should appear in the top right corner of your web browser, and hence; The add-on is installed.

2.4 Opera

In the address bar type in `opera:extensions` which will open up the add-on page. Enable Developer mode in the top right corner. Click "Load unpacked", navigate to the folder containing `.github`, `.tx`, `doc`, `release-utils`, `scripts`, `src` and `tests`. Mark the `src` folder and choose Select folder.

After this a new icon should appear in the top right corner of your web browser, and hence; The add-on is installed.

3 Usage

We want you to visit a total of five different sites, preferably your top five most common visited sites. For every site, one at a time, we want you to click the icon in the top right and visit the link which leads you to a survey about trackers on that given site. You will need to submit the url of the current site to get started with the questions.

The survey will take 10 minutes approximately, at least the first time since we want you to read through the questions thoroughly.
